Questions:

A. Implement automation test cases

1. Creating new Lazada account:

   1. Visit https://www.lazada.vn/customer/account/create
   2. Create a new Lazada account
   3. Verify the new account creates successfully

2. Verifying the search function

   1. Visit https://www.lazada.vn/
   2. Search for a random keyword (ex. 'test')
   3. Verify the search result returns correctly

Note: Please use the automation best practices to implement the test cases, the more test cases are welcome. The test case can be implemented by any your favorite languages.

B. Answering the following questions:

1. What is the benefit of automation test and why? Please provide some of your examples to prove that

2. What makes a good automation test tool, and what is a bad one? Why?

Submission:

After finishing the questions, kindly following this step to submit your test:

1. Create a Github account (if you haven't had yet)

2. Create a new repository name auto_test_your_name

3. Push your automation test scripts and the answers to the repository

4. Provide us your repository link with the instruction to run your test from our end

GOOD LUCK :">
